GeboMD, LLC

Medical Office Automation

Origin Practice Suite

Practice management, scheduler and electronic medical records

Solutions designed with your practice in mind from a company that knows your challenges. Accelerate your reimbursements, streamline workflow, enhance documentation and increase internal efficiencies with our comprehensive platform of integrated solutions.

Our practice management and electronic medical record solutions cover virtually all practice management and clinical tasks including: Registration. Billing. Appointment Scheduling. Collections. Electronic Remittance Advice. Ad Hoc Data Analysis and Reporting. Patient Charting. Document Imaging and Routing. Electronic Prescribing. Office Workflow. Messaging. Tasking. And Electronic Ordering.

You can opt for the whole system or select only the modules you need. Our applications interface with many of the clinical, reporting, accounting and hospital systems in use today. And they're compatible with all industry standards for electronic data interchange (EDI), including HL-7, ANSI, NSF and all formats specified by HIPAA.

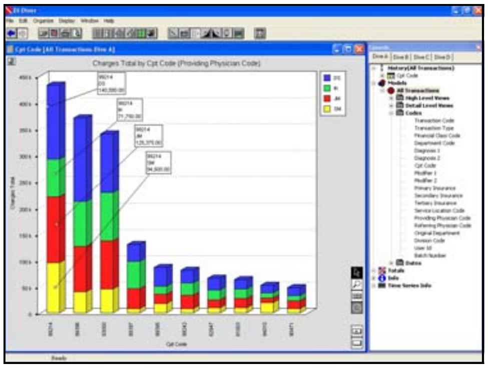
Origin Practice Suite

Say goodbye to messy desks, lost charts, incomplete notes and tracking nightmares and...hello to a better way of running your office.

Planning your day becomes easier from the very first moment you open the Origin Practice Suite. You will be greeted with **your "Desktop"** showing you how many messages, tasks, appointments and other items you have to work on today. Easy, clickable links will bring you right to those items so you can address the most critical items immediately. No longer will you need to wade through piles of paper on your desk to find out what you have to work on. When you need a patient chart, all you have to do is click.

Combine our superior software with unparalleled customer service and you have more than just a software program, you have a complete solution from a company that understands your needs.



When you purchase your new solution, the experts at Origin setup your new system and support you, ensuring a smooth transition to your new system. Every set-up includes:

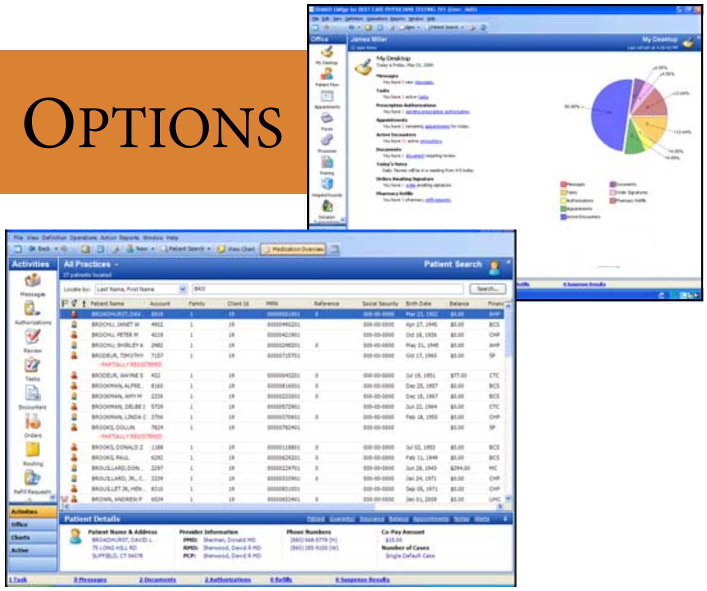
- Installation of purchased Origin software on your existing network.
- An assigned Implementation Specialist will oversee all aspects of the transition and will be ready to answer any questions or concerns you may have.
- Set-up and configuration of your database including practice specifics such as users, providers, hours of operation, fee schedules, referring providers, appointment types, office and service locations, and insurance table.
- Ordering and installation of hardware and connections within the Origin hardware service area.
- Coordination of hardware with outside vendors for clients outside of the Origin hardware service area.
- Scheduling of training for the practice.

Your solution will include a state-of-the art integrated practice management system, world class support team, and unparallel training from the Origin Healthcare Solution experts.

"We began our search for a new practice management software system that would be user-friendly, serve our specific needs as a specialty practice, and offer consistently reliable and readily available support. We chose OHS because we were convinced that their responsive and honest approach during our search phase would carry through to our day-to-day relationship with them. We have not been disappointed. The system has performed very well, and when we have questions or need assistance, the software support staff is easy to reach, friendly, caring and knowledgeable."

Barbara Quinnell, Office Manager
Allergy & Asthma Associates

OPTIONS



Our practice management and electronic medical record solutions cover virtually all practice management and clinical tasks. You can opt for the whole system or select only the modules you need.

Below is an overview of the features available.

SCHEDULING

Accommodating your routine as well as your patients.

Your practice's routines, scheduling requirements and patient flow are unique. We designed Origin Scheduler™ with this in mind. It configures to your flow, allowing you to customize your templates, link appointments, and manage your workflow.

You can view appointments by various categories, from day and time to location. You can also check your patients through a complete work flow, allowing you to pinpoint any bottlenecks in your office flow process.

- **Save time** scheduling appointments with our next available appointment finder.
- It's easy to **see your day at a glance** with color coded appointments and patient details displayed in your appointment book.
- **Manage your work flow** with the patient flow chart showing you who is in the waiting room, exam rooms, and who has checked out.
- **Streamline** the payment posting process by posting charges and co-pays at the time of check-in.

> New receptionists only need 30 minutes of training and they're able to use the scheduling software with ease. This powerful software is amazingly simple to use.
>
> As the practice manager, the most valuable asset I have, other than the employees, is the Origin software.
>
> **Kathy Roy, Practice Manager**
> *Mauks Koepke Medical, LLC*

Appointment Resource Definition

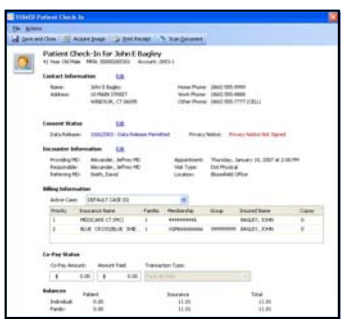
- Multi-resource scheduling – independent time intervals for providers, technicians, rooms and clinical equipment
- Resource and location start and stop times for each day of the week
- Multiple location scheduling
- Practice definable time blocking
- Reserve time slots for specific procedures
- Fully customizable scheduling templates
- Customize screen settings, appointment types, durations, overbooking features, time slots intervals, and more

Appointment Views

- View appointments by day, week, month or multiple resource
- Simultaneously view multiple providers or resources
- Color code appointment types and time blocks
- Ability to double, triple or quadruple book appointment time slots

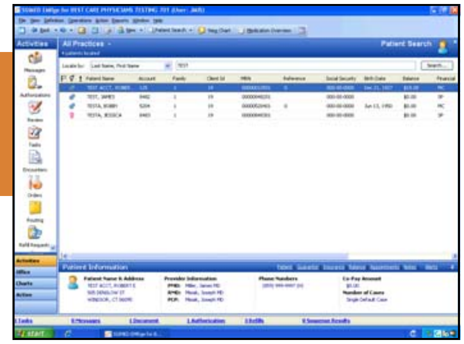
Patient Appointments

- Locate appointments by date, time, resource, procedure, location or provider
- Realtime eligibility checking
- Schedule multiple patient appointments at the same time
- Schedule recurring patient appointments
- Detailed history for all appointment changes
- Select the next available appointment based on the patient's preference



- Time stamp patients arrival, activation, and check out to track waiting time
- Access and update patient account information
- Pre-authorization alerts and Referral alerts
- Simultaneous schedule appointments for multiple doctors, technicians, and/or facilities
- Print a SuperBill for each patient as they check in

Billing



Keeping it simple and streamlined.

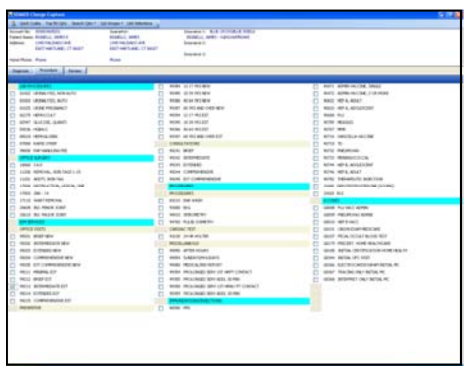
Origin Manager™ simplifies and streamlines every process in your office. From capturing charge and payment postings to patient management and reporting.

We use Manager ourselves every day and we are constantly fine-tuning and adapting it to meet future needs. We take your suggestions seriously. Today's version is the result of a Continual Improvement Initiative. Future releases will be too. So get ready for innovation, advanced functionality and new product features.

- **Save time and energy** with a single source for all your patient information. From patient financial history to scheduled appointments, demographics to insurance carriers. Everything is in one easy-to-access location
- Easy-to-use, intelligent charge and payment posting **saves hours per day**.
- **Decrease your account receivables** with tools to help identify overdue accounts, track the actions taken on those accounts, and automate the follow-up process.
- **Simplify coding** with built in, searchable CPT and ICD-9 tables.

Patient Management

- View patient financial history and demographic data including appointments, insurance information, notes, and more
- Family creation and family billing ability
- Insurance eligibility checking
- Insurance validation – scans for inactive or expired carriers and remit addresses
- Patient recall and follow-up tools
- Patient Reminders to remind patients of follow-up appointments and other critical issues
- Pre-authorization tracking
- Easy letter and label merging with Microsoft Word
- Patient and insurance company balances displayed in most patient-related views
- Scan a patients insurance card and attach to the patient record for easy viewing
- Manage inbound and outbound patient referrals with our referral tracker

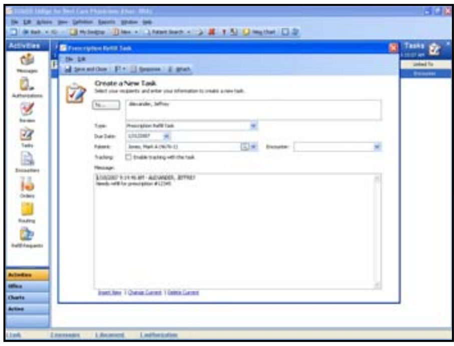


Charge & Payment Posting

- Handles both electronic and hardcopy claims
- Accommodates multiple fee schedules based on provider, place of service, insurance companies and modifiers
- Charge & payment posting directly from patient registration
- Line-item posting with batch verification
- Pre-closing edits on all posted transactions reduces errors
- Direct charge posting from patient appointment information
- Post multiple charges with a single entry
- Post a single payment to multiple charges
- CPT and ICD-9 code linkage tables ensure correct charge posting combinations
- Fully integrated electronic claims processing

System Definition

- Built in CPT & ICD-9 code tables, searchable by code and description
- Extensive free-form and practice definable notes
- Multiple office definable Superbill, letter and label templates
- Industry-Standard Interfaces supports data exchange using the industry-standard HL7 interface specifications



INCLUDED FEATURES

The features on this pages are available with both Origin Manager and EMRge.

"Your Desktop" makes it easier to plan your day by showing you how many messages, tasks, appointments and other items you have to work on today. Easy, clickable links will bring you right to those items so you can address the most critical items immediately.

Interoffice messaging is a simple way to communicate with your staff. Send out office wide communications such as office closings or messages to a specific person. Attach patient charts saving everyone time. With instant transmission of messages, you could even send a message for help while conducting an exam or let a nurse know the patient is ready for an injection.

Go paperless by scanning or pulling any document into the system to include it in your patient's charts. Insurance cards, old charts, referring letters, lab results, photos and even x-rays can be included.

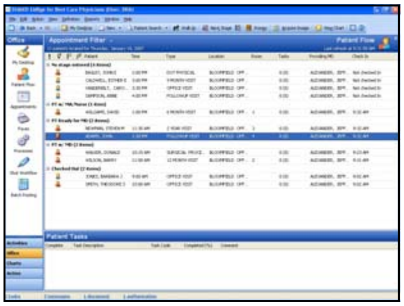
Integrated Faxing offers the convenience of sending and receiving patient information, letters, orders or any other document from within the software.

Track your tasks and stay on top of your work using your electronic to-do list. You can assign tasks to yourself or anyone in your office and track the progress of the tasks.

Route your documents to individual users or groups. You can view documents and then sign and lock them for safe keeping or re-route them. All documents are stored in your database to keep them safe from unauthorized viewing and changing.

Write on scanned images in the system using your Tablet PC stylus or your mouse. All annotations are stored in the system as part of the patient chart.

Advanced patient check-in functionality makes front office staff more efficient by providing a tool for verifying patient information, collecting and posting co-pays and spotting patient alerts through EMRge.

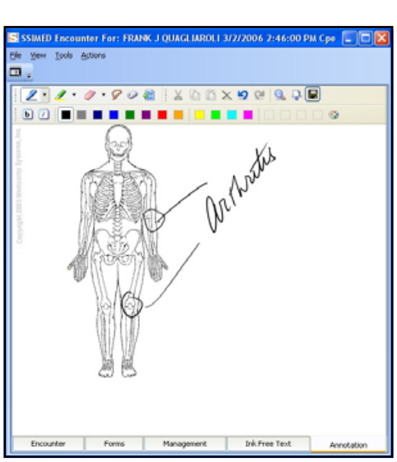


Watch patient flow through the office from check-in to check-out. The Patient Flow form shows who is scheduled, who has been checked in and where they are in the office all customized to your current work flow procedures.

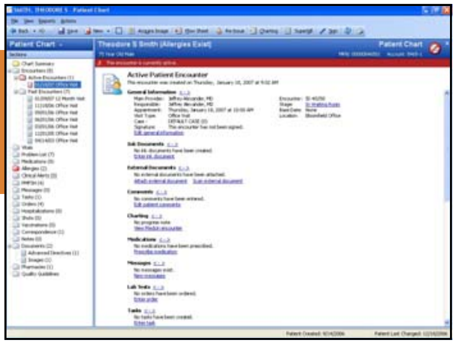
Query the patient population and search your patient population to create reports of patients based on prescriptions given, procedures done, or illness present for follow-up, reminders or drug recall notices.

Over 100 standard reports are included and if that is not enough, you can query and extract database to Microsoft Excel®. Through Open Database Connectivity (ODBC) you have virtually unlimited ad-hoc & reporting abilities.

Advanced security features provide audit trails and multi-level security allowing you to specify who is able to see information and find out who made changes. You can control access to all the information by roles or for certain individuals.



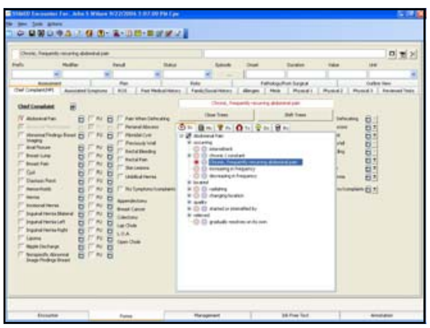
Electronic Health Records



Origin EMRge™ allows your practice to organize patient clinical data in a way that streamlines workflow and makes information retrieval easy and efficient. EMRge is integrated with technology from top healthcare companies including SureScripts®, Medcin®, RxHub®, MDConsult, FirstConsult, and AnvitaHealth™ to give you all the tools you need to improve patient

User friendly layout of the patient chart logically displays all patient clinical information. Quickly review a summary of the patient's health information at a glance with every visit, medication, allergy, lab order and more available with a click

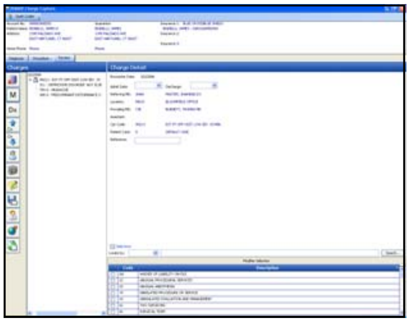
Expansive clinical content through the integrated Medcin clinical knowledge engine. Medcin includes more than 250,000 clinical data elements encompassing symptoms, history, physical examination, tests, diagnoses and therapy. With Intelligent Prompting and Alerts to support entry, and problem-oriented flow sheets to simplify review of the record you will find encounters going quicker and documentation being easier. You can also enter in comments or create an encounter note using just free text.



User-designed encounter forms and lists make it easy. Data is entered using checkboxes and simple input fields and coded for easy storage and retrieval. Specific forms for each specialty are available and the experts at OHS will work with you to create forms customized to your practice.

Voice recognition and input through Dragon Naturally Speaking eliminates the need for transcription and speeds up documentation.

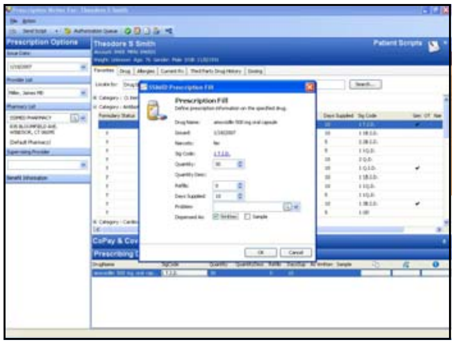
Automatic coding of every visit simplifies the process of coding your visits and ensures that accurate codes are used. Using Medcin, evaluation & management (E&M) tables are available following the 1995 and also the 1997 General multi-system standards. The 43,000+ diagnoses have been reviewed for Risk and Complexity and EMRge will determine the appropriate E&M code for that visit. The user has the option to override the code if desired. Never worry about under coding again. You can confidently code for higher levels of service based on thorough documentation.



Interaction with Manager means all patient encounter information, including diagnostic and CPT codes go straight into Manager for billing. Your staff will save time entering in information and reduce input errors.

"I began using EMRge when it first came out, and that was the best business decision that I've made. EMRge is very easy to use, integrates seamlessly with Manager and has improved my coding and billing. The templates are so customizable that they reflect the way I used to write my notes."

Dr. Philip Corvo, Surgeon
Stamford CT



E-Prescribing & Forms

Electronic Prescribing

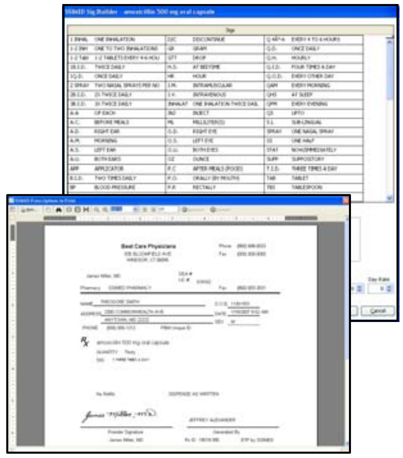
Electronic prescribing made simple. Whether you use just Manager or full EMR, ePrescribing is available. The Origin Practice Suite has been integrated with the SureScripts and RxHub networks to provide access to over 95% of the pharmacies in the United States. Add that to integration with the Cerner Multum drug database to uncover negative drug interactions, and the RxHub formulary and eligibility checking services, and you have the most comprehensive ePrescribing solution available today.

Writing prescriptions the easy way with simple drop down menus and checkboxes. All available medications are pre-populated and updated regularly. Your most commonly written prescriptions can be saved in a favorites list to eliminate the need to rewrite the same prescription over and over.

Sending prescriptions can be done multiple ways. It is your choice to transfer them electronically to pharmacies, fax them automatically or print and hand to the patient.

Connect to the Pharmacy Health Information Exchange operated by SureScripts. Using the network, along with sending your prescriptions electronically, you can also receive refill requests directly from the pharmacy.

Receive patient specific medication information through RxHub. ePrescribing has the ability to push real-time eligibility, formulary, and medication history information to clinicians at the point of care.



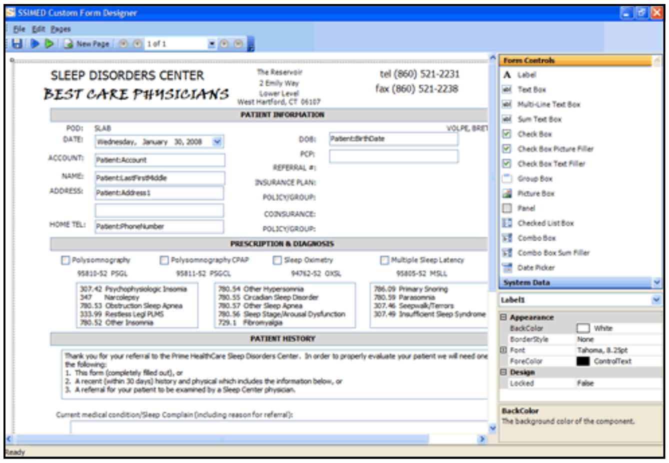
Reduce negative drug reactions using the comprehensive Cerner Multum database. It includes a comprehensive list of drugs that are updated monthly as well as drug to drug interactions, drug to drug allergy notifications, and drug therapeutic duplications.

Automatically bill the appropriate PQRI code to receive ePrescribing and documentation incentives from CMS.

Custom Form Designer

Using this tool, create custom forms for use anywhere in your practice. New patient information forms, encounter forms, checklists and documentation are only a few of the uses for this tool. Fill forms out using your keyboard and mouse and always have an electronic copy. Elements can be added in the form of checkboxes, drop down boxes, calendars, pictures and textboxes.

Forms can be patient specific such as an information sheet or generic such as a lunch sign up. Route the forms throughout your office in the software or simply file them in a patient's record.



ELECTRONIC LAB ORDER MANAGEMENT

Reduce paperwork and eliminate manual tracking of lab orders. Our software offers you the ability to order laboratory tests by faxing or printing out order forms for the labs. For an additional charge, you can take it a step further and send the orders directly to the laboratories, such as Quest and Labcorp using a bi-directional interface.

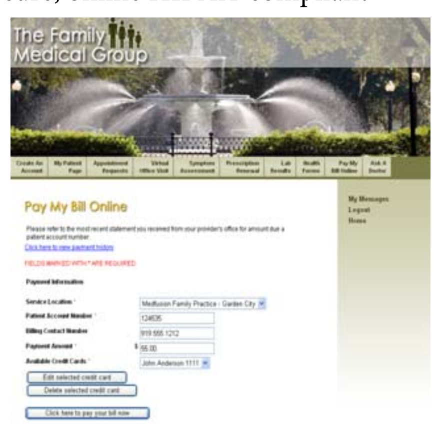
Laboratory test orders are placed in the software and are electronically transmitted directly to the reference lab of your choice. When testing is completed, results are digitally transmitted back for review, acceptance and storage in the patient's chart.

- **Fully Bi-directional Interface** to major national reference laboratories such as Quest Diagnostics and LabCorp
- **Increased time and cost savings** by eliminating paper based processes
- **Get more out of EMRge** by automatically transmitting lab orders to reference labs and receiving patient results back directly into EMRge.
- **Patient safety and care** through faster turn around time of patient results.

> "As a long time EMR user it was hard to imagine that one EMR could be so much better then another but it is true. When we switched from our old system to EMRge in early 2006 I was shocked.
>
> EMRge has dramatically improved our workflow and productivity. With these improvements and the tools built into the system we are able to spend more time working on our quality of care and less time doing the busy work of medicine."
>
> **Brian C. Procter MD**
> *McKinney Family Medicine*

WEB PORTAL

Integration with Medfusion's patient portal is available, offering physician practices the ability to interact electronically with their patients using Medfusion's secure, online HIPAA-compliant patient portal.



The portal is available 24/7 and reduces the time needed for:

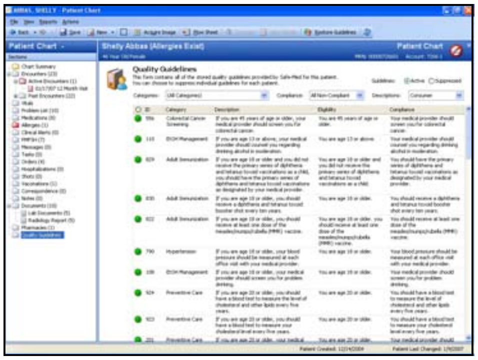
- Online patient pre-registration
- Online appointment requests
- Online prescription renewals
- Referral management
- Personal health records
- Outbound secure messaging, including appointment reminders

Patient data will populate the Origin Practice Suite with patient demographics and other relevant patient information entered into the portal by patients.

Add–Ons

MD Consult and First Consult

Together these services allow **treatment guidelines and protocols** to be reviewed and read at point of care. MD Consult brings leading medical resources together into one integrated service to help you efficiently find answers to pressing clinical questions and make better treatment decisions. First Consult is a revolutionary clinical information system that gives you point-of-care access to evidence-based diagnostic tools, and the latest findings in patient evaluation and management.



AnvitaHealth

Health Maintenance Protocols at point of care. Virtually all patient attributes, including lab tests and treatments to date, are processed to identify deviations from best practice guidelines, effortlessly and within seconds at the point of care. Recommended steps are presented to the physician when a patients chart is opened. As needed, you can run a report to identify patients at risk, those who will be coming due for future interventions, as well as generate quality reports for self-assessment.

Collector

Taking care of business within your own criteria. Using your practice's predefined criteria, Collector first identifies overdue accounts. Then it provides the tools for efficient and focused receivable management. The result? Your patients receive courteous, professional reminders. And you receive payment.

- Complete on-line documentation of all patient contacts.
- Automated work flow and follow-up queues by user.
- Extensive call and collection letter matrix schedules.
- Track-all collection activity by account and user.
- Improves the in-house collections process.
- Eliminates dependency on ledgers and reports.
- Integrated with Origin Manager™ patient demographic and financial data.
- Auto write-off and electronic transmission to collection agency.
- Maintains a tickler list for collectors to work accounts.

Electronic Remittance Advice (ERA)

Making your posting easier. Electronic Remittance Advice (ERA) module dramatically reduces the amount of time billers spend posting explanation of benefits (EOB's). ERA modules read and interpret the insurance carrier's electronic EOB files and prepare those files for system-wide upload, resulting in fast and precise line item posting.

- Extensive front-end auditing to ensure correct data uploads.
- Easy to read exception report lists unmatched items for research/review.
- Payment and adjustment information is compared to allowable fee schedules for accuracy.
- Generates complete audit reports.
- Available for Medicare, Medicaid and BC/BS in many states.
- Posts 30+ page EOB's in less than 5 minutes.
- Saves time by allowing your practice to reallocate resources to more profitable endeavors such as claim follow-up and collections.

Code Check™

Get it right the first time. On average, you waste countless hours researching denied claims for errors. Code Check™ helps coders review charges by scanning each claim before it goes out the door. With a single click, it checks your procedures against the latest CCI and LMRP edits. Ultimately, error-free claims get paid faster. So there's a real bottom-line benefit to being right the first time.

- Validation includes proper modifier usage, orders procedures by RVU for maximum reimbursement, checks bundling errors and verifies proper ICD-9 by region based on Local Medical Review Policy (LMRP).
- Single button, real-time claim checking from Origin Manager™ charge posting.
- CPT codes with correct coding guidelines, global days and allowed amounts.
- ICD-9 codes with indicators showing highest level coding.
- ASC allowed CPT codes and group levels.
- Crosswalk ICD-9, CPT codes and RVU calculator with insurance analysis.
- Searchable knowledgebase that includes local Medicare bulletins and the Federal Register indexed by CPT code.
- HCPCS codes in a searchable database.
- Interactive question and answer forum monitored by a Certified Procedural Coder.
- E&M code documentation requirements.

Technology Partners

Origin has formed business partnerships with some of the best companies in the industry to offer our clients additional practice management and electronic health record tools and services.
